

Ms. Baker

Today, let's talk about living with robots. Deepa, what do you think?

Deepa

I think robots make our lives better because they help us in many ways. Some robots can put together products, like cars or cameras. They do it quickly and precisely. Other robots can work in dangerous places instead of people.

Kota

I agree with her in part. The robots working for us are amazing. But there's also a big problem. Robots are so efficient that they're taking people's jobs away. I'm worried about losing our future jobs.
